DD Form 254 Reverse, DEC 90 (EF)

THIS DOCUMENT IS A CONTINUATION SHEET OF BLOCK 13 OF DD
FORM 254, DATED 21 JANUARY 01

This agreement is for equipment installation and maintenance services on equipment that process classified information. Actual knowledge of generation or production of classified information is not required for the performance of the agreement. DISN security architecture requires personnel that can influence the network to be cleared.

Ref 10g: The contractor will be performing installation and maintenance on a system that contains NATO information. No access to the information is required. Cleared personnel are required because access to the information can not be precluded by escorting personnel. Access to NATO requires a final U.S. Government clearance at the appropriate level. A representative of the Government will brief the Facility Security Officer (FSO), who in turn will brief other contractor personnel requiring access under the agreement. Any clarification guidance needed will be provided by the using activity.

Maintenance or installation personnel having access to network equipment on the sensitive unclassified DISN must have a minimum SECRET clearance based on a background investigation. Network management personnel who operate or maintain equipment within a network management center shall have a security clearance commensurate with that network's security level.

Maintenance or installation personnel having access to network equipment on any of the classified DISN networks must have a clearance up to TOP SECRET commensurate with the security level of the classified network being maintained or installed and also be eligible for SCI access.
